

PeeverLock & Vista Seal

- Patented system for sealing and identifying the content of bags with a crop diameter between 2.3 mm and 13.6 mm.
- The little 'Vista-seal' is slipped into the colored arm of the shipping box. The shipping box remains firmly in place on the crop of the bag, securing the content of the bags and its own document holder.
- By making use of one of the serrated inserts, with a smaller crop, diameter from 2.3 mm may also be sealed.
- Recyclable, durable and sturdy material.
- Multiple use: the purchase of the 'Peeverlock-shipping box' requires a small investment that is quickly recovered thanks to the reduced cost of the vista-sealing.

Available colours ●
